

Maximo Specific

Implementations

Maxis consultants offer industry, technical, and functional experience. Having implemented Maximo in a variety of industry from oil and gas, energy, and manufacturing to healthcare, and higher education, our consultants offer a combined set of experience that allows them to speak the language of the customer, which expedites planning for an implementation that delivers full value for the organization.

Maxis has assimilated and developed a substantial repository of intellectual capital pertaining to Maximo implementations and best practices for asset management. Our clients benefit from the methodologies, tools, and rapid implementation templates developed through the delivery of hundreds of Maximo engagements.

We utilize a structured approach for each implementation of software, effectively integrating Maximo into the workflow of the organization or individual end-user. This ensures that every implementation stays on time and within budget and that Maximo will support your organization's goals.

Integrations

Valuable information that organizations should share across applications often gets stored in silos and lacks visibility, which means manually sharing data between different applications to provide information about potential risks involved with operating assets. This manual process can be time consuming, include inaccuracies, and cause delays in managing assets.

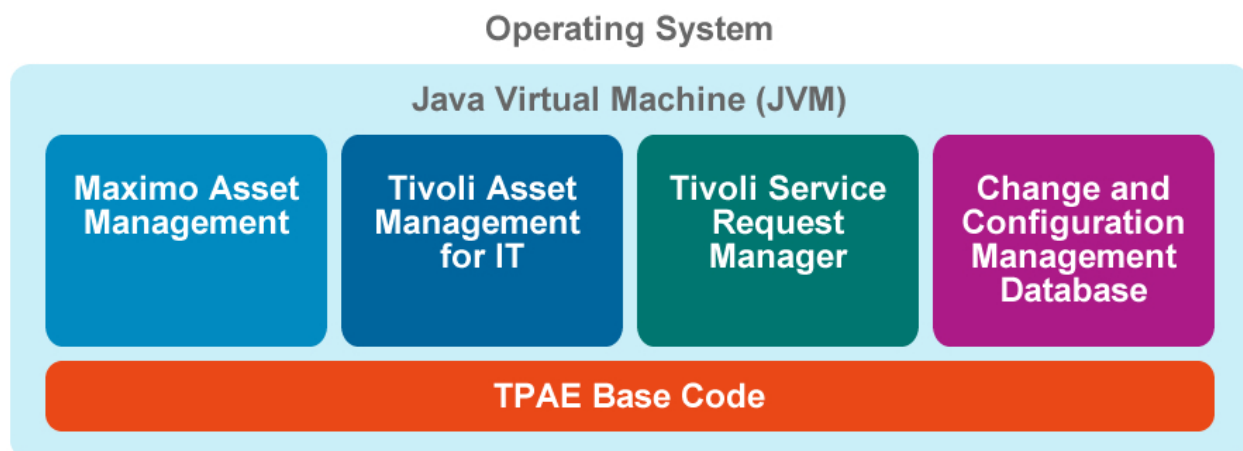

Mx- Care™

Our help desk can do the heavy lifting to quickly troubleshoot a problem or treat a critical issue.

- Proactive Monitoring
- Application, Database, and Websphere Support
- Security Groups
- Minor Patches
- Dev/Test Refresh
- Functional Support

As we work closely with clients to resolve performance issues, we transfer knowledge to them so they can independently support their system to continue improving performance.

Experience and Understanding Improve Performance Having years of experience with Maximo and an in-depth knowledge of the Tivoli Process Automation Engine, TPAE, we have the skills to solve some of the most difficult performance problems. We understand how Maximo works!

Deployment Choices Affect Performance

System performance depends on more than the applications and the database. The network architecture affects performance. Application server configuration can hurt or improve performance. The way you deploy Maximo across servers affects the way the products perform and many other factors impact the end-user experience.

Mx-QuickStart™ – FOR A RAPID MAXIMO IMPLEMENTATION

Maxis is changing the way organizations implement Maximo. We implement Maximo in several weeks rather than several months, helping organizations realize the value of Maximo sooner.

Maximo is a robust application, requiring a cross-section of IT skills and product specific knowledge. Companies find it challenging to implement Maximo with the diversity of expertise and technical skills required.

Maxis offers a tested Maximo solution: Mx-QuickStart™, delivering a speedy and efficient implementation using a rapid deployment methodology. Maxis will install Maximo and Mx-QuickStart™, load your data, test the installation, and provide training in a few short weeks!

Start using Maximo in weeks, not months. Achieve ROI on your Maximo implementation much sooner!

MX-QUICKSTART™ INCLUDES:

- Creation of Start Centers
- Pre-configured work flows
- Pre-configured work management process
- Auto dispatching of work
- KPI's
- User-friendly screen design
- Security groups
