

ALCHEMIZE WAS MADE FOR REPLATFORMING & CLOUD MODERNIZATION

It is not uncommon for large companies to change their database platforms for a variety of reasons like better security, more reliable technology and better prices. But data migration is traditionally a time consuming and error prone process. That's why we developed Alchemize as an automated solution. Alchemize is a data management platform that specializes in cloud modernization as well as converting from one system to another.

Alchemize is a very powerful and multifaceted data management tool that

automates the manual process of managing data. It is unique because it uses a holistic approach to problem-solving. By self-teaching the entirety of the DBMSs and applications involved, Alchemize provides transparency and access to perform the most difficult and time-consuming data management projects with just a few clicks of a button. In addition, this whole system approach allows for uses throughout the information lifecycle.

REPLATFORMING WIZARD

Maxis Technology created the Replatforming Wizard tool specifically designed to focus on replatforming... not process inconsistencies. The Replatforming Wizard's automation and built-in code-free environment maintains data integrity, eliminates human error, reduces risk eliminating the traditional pain and frustration of the process.

ALCHEMIZE REPLATFORMING STRENGTHS:

-  The Methodology is built-in
-  Moves and converts original data to new data formats
-  Essential for cloud modernization or system to system migrations
-  Matches most compatible data types (DDL) chosen from one database to another
-  Better control and management of database conversion
-  Reduced manpower for the project
-  Promotes system quality and reliability
-  Quicker ROI
